

Environmental Information Disclosure (EID) for Electric Power Supply Service: Maryland
Electricity Supplied by Energo Power & Gas LLC dba Energo "Energo" from June 1, 2022 to May 1, 2023

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions.

Energo will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

In this report, the standardized environment data below is the PJM regional averages only of most power plants in the Mid-Atlantic region. It is information collected from the PJM Residual Mix for fuel mix data and average emissions data.

Air Emissions Rates

CO₂ is a "greenhouse gas" which may contribute to global climate change. NO_x and SO₂ released into the atmosphere react to form acid rain. NO_x also react to form ground level ozone, an unhealthy component of "smog".

The amount of air pollution associated with the generation of the electricity production for this region is shown in the table at right.

Data Source	CO ₂ (lb/MWh)	NO _x (lb/MWh)	SO ₂ (lb/MWh)
PJM System Mix	766.35	0.29	0.37

Energo is a member of the PJM regional transmission organization, therefore, the environmental information contained herein includes regional data calculated by PJM. For additional information about this label, contact Energo at (888) 378-9898.
